

Čuda J., Skálová H., Meyerson L. A. & Pyšek P. (2021) Regeneration of *Phragmites australis* from rhizome and culm fragments: an experimental test of environmental effects, population origin and invasion status. – *Preslia* 93: 237–254.

Electronic appendices 1–2:

Electronic Appendix 1. – Rhizome fragments ready for planting. Fragments of standardized length (20 cm) and thickness without terminal buds were used, roots were shortened to same length of ~ 1 cm. Clones of two groups are shown, the rhizomes of NA-native clone NA61 above and NA-invasive clone NA159 below.

Electronic Appendix 2. – One of the beds with pools and pots that were randomly placed.
