1 **Electronic Appendix 8.** – Morphological characters boxplots

2  
3 Fig 8.1. – Boxplots of 14 morphological characters of *Sparganium erectum* based on 227 individuals. Colours indicate  
4 AFLP groups detected by STRUCTURE.

1 **Electronic Appendix 9.** – Discriminant analysis

2 Table 9.1. – Discriminant classification of fruit characters for *Sparganium erectum* subspecies. N – number of  
3 individuals, % – percentage of correctly assigned individuals to predefined genetic groups.

| Subsp.             | <i>neglectum</i> | <i>oocarpum</i> | <i>erectum</i> | <i>microcarpum</i> | N   | %     |
|--------------------|------------------|-----------------|----------------|--------------------|-----|-------|
| <i>erectum</i>     | 0                | 4               | 33             | 0                  | 37  | 89.19 |
| <i>microcarpum</i> | 4                | 4               | 2              | 67                 | 77  | 87.01 |
| <i>neglectum</i>   | 9                | 2               | 0              | 2                  | 13  | 69.23 |
| <i>oocarpum</i>    | 1                | 44              | 2              | 0                  | 47  | 93.62 |
| Total              | 14               | 54              | 37             | 69                 | 174 | 87.93 |
