

Meier T., Hensen I. & Partzsch M. (2022) Effects of nitrogen addition and above-ground biomass removal on the growth and interactions between species of xerothermic grasses. – Preslia 94: 607–629.

Supplementary Table S4. – Results of the two-way ANOVA of leaf area, leaf drymass, LDMC, C/N ratio and RII in the competition experiment: *Bromus erectus* in combination with 1) *Brachypodium pinnatum*, 2) *Stipa capillata* and 3) *S. tirsia* in the first year (nutrient condition: nutrient poor/ nutrient rich; species composition: 9, 6:3, 3:6). Degrees of freedom (df), F-values and error probabilities (* p < 0.05, ** p < 0.1, *** p < 0.001) are given. Abbreviations: NC = nutrient condition; SC = species composition; E = Error; ns = not significant.

Source of variation	leaf area [mm ²]			leaf dry mass [mg]			LDMC [mg/g]			C/N ratio
