(2023) Formalized classification of the class *Montio-Cardaminetea* in Europe: towards a consistent typology of spring vegetation. – *Preslia* 95: 347–383.

#### Supplementary Data S1. Sources and preliminary data selection.

**GIVD:** GIVD code for databases stored in EVA

**M-C:** Number of plots identified by the definition of the *Montio-Cardaminetea* class (Supplementary material S3) but including also presence-absence data, plots of extreme sizes, plots without coordinates, plots without determined bryophytes and bryophyte synusiae.

**non-strat:** Number of plots in *non-stratified* dataset (without presence-absence data, plots of extreme sizes, plots without coordinates, plots without determined bryophytes and bryophyte synusiae).

**strat.:** Number of plots in geographically stratified dataset.
