Urfus T., Pekařová M., Rejlová L., Záveská E., Weiser M., Josefiová J. & Chrtek J. (2024) *Urtica kioviensis*, a rare species of stinging nettle threatened by hybridization. – Preslia 96: 329–349.

Supplementary Table S3. Results of canonical discriminant analyses (CDA 2) of *Urtica dioica* (diploids UD2x, tetraploids UD4x), *U. kioviensis* (UK, 2x), and their diploid (H2x) and triploid (H3x) hybrids, presenting total canonical structure values that express correlations of morphological characters with canonical axes. High values are in bold. Character acronyms are explained in Table 2.
