Skokanová K., Zozomová-Lihová J., Mereďa P. Jr., Španiel S., Hodálová I., Mártonfiová L., Svitok M., Kolarčik V. & Šingliarová B. (2025) Not as boring as expected: triploids, pentaploids and aneuploids of invasive *Solidago* species revealed by detailed karyological examination in central Europe. – Preslia 97: 129–155.

Supplementary Fig. S5. Maximum likelihood phylogram based on ITS sequences. Terminal labels denote individual sequences (see Table S3); sequences of *Solidago canadensis* and *S. gigantea* are coloured according to the species and cytotype assignment, labels of samples from the native range with black framed letters. The bootstrap values (BP≥50%) calculated by maximum likelihood analysis are presented above the main branches.
