

Nitz E., Carnicero P., Barfuss M. H. J. & Schönswetter P. (2025) Genetic, morphometric and microhabitat data reveal that papillose feather grasses in the Eastern Alps (*Stipa epilosa* auct.) do not constitute a separate taxonomic entity. – *Preslia* 97: 175–190.

**Supplementary Figure S1.** Scatterplots of genetic vs. geographic distances (A), and genetic distances vs. hair length differences (B). The fitted linear models are represented by a red line.
