

Velasco Monés G., Padullés Cubino J. & Lososová Z. (2025) Disentangling the effects of traits and environmental factors on species' successional optima: a study from central Europe. – *Preslia* 97: 241–260.

Supplementary Fig. S3. Increase in explained variance.

Supplementary Fig. S3. Increase of explained variance when fitting SO to the ordination space of the PCA done on traits by the function *envfit* from the *vegan* package. We can see that we need 15 axes to reach the (unadjusted) goodness of fit of the linear models that use 13 traits selected by the LASSO.
