

Dolejšek V., Mesterházy A., Lučanová M., Brožová V., Kaplan Z., Košnar J., Prančl J. & Koutecký P. (2026) Hidden diversity of *Ranunculus* sect. *Batrachium* in the Pannonian Basin: A Mediterranean trace in central Europe? – Preslia 98: 105–125.

Supplementary Table S1. Locality details, genome sizes and GenBank accession numbers. In homogeneous populations, population numbers are given (Ref. no.), whereas in mixed populations, individuals are listed separately for each cytotype. Populations marked with a plus sign in the Ref. no. column were included in previous studies (Prančl et al. 2018, Koutecký et al. 2022). Taxon and cytotype designations correspond to those used in Table 1 in the main article. Individuals of the *R. peltatus* ‘Pannonian 4x’ and *R. peltatus* ‘6x’ cytotypes with outlying genome size values are presented separately and marked with an asterisk. Country codes (Locality): AT – Austria, HR – Croatia, HU – Hungary, SK – Slovakia. Collector abbreviations (Collected): AM – Attila Mesterházy, JP – Jan Prančl, KK – Klára Nunvářová-Kabátová, MH - Magdalena Hrdinová, ML – Magdalena Lučanová, PE – Peter Englmaier, PK – Petr Koutecký, VD – Vojtěch Dolejšek, ZK – Zdeněk Kaplan. N – number of individuals analysed for genome size by flow cytometry; mean sample/standard ratio and calculated 2C value based on $2C = 3.38$ pg for *Bellis perennis*; SE – standard error of the mean. The last three columns contain GenBank accession numbers for the three DNA regions. Accession numbers given in brackets denote identical sequences in GenBank that were obtained from samples analysed by Koutecký et al. (2022); sequences from the respective samples analysed in the present study were therefore not deposited separately.
