Vymazalová M., Skokanová H., Divíšek J. & Axmanová I. (2026) Does land-use continuity matter? The impact of almost two centuries of land-use history on temperate grasslands. – Preslia 98: 281–302.

Supplementary Fig. S7. Proportions of the total area of all stable land uses (unchanged during 1840–2006; without specification of land-use categories) in the grassland plots and their surroundings for (A) buffer 1 km as landscape scale and (B) buffer 300 m as local scale. Different letters above the boxes indicate significant differences among groups according to a post-hoc Dunn's test with Benjamini-Hochberg correction ($P < 0.001$) following a non-parametric Kruskal-Wallis test ($p < 0.001$), whereas groups sharing the same letter do not differ significantly. DG = dry grasslands.
