Peřina O., Salony S., Celestini S., Shubina N., Meirmans P., Wessely J., Dullinger S. & Kolář F. (2026) Niche expansion of tetraploid Medicago falcata at different spatial scales. – Preslia 98: 327–348.

Supplementary Fig. S1. Validation scores of individual species distribution models. Histogram showing distribution of true skill statistic (TSS) values used for validation of individual diploid species distribution models (A) in Europe, (C) in central Europe and tetraploid species distribution models (B) in Europe, (D) in central Europe. The red line represents TSS = 0.5, which was set as a threshold and only individual models with TSS ≥ 0.5 were included in the ensemble models.
